

NOVA MINDS

Adaptive AI Technical Interviewer

FROM STATIC QUESTIONS → TO AN INTERVIEW THAT THINKS

NOVA MINDS is an AI-driven technical interview system that continuously analyzes a candidate's responses and adapts the next question, difficulty and topic in real time. It evaluates **how deeply** a candidate understands a concept—not just whether an answer is correct.

EXCLUSIVE FEATURES

■ Adaptive Interview Engine	Every answer influences the next question—creating a dynamic, non-scripted interview.
■ Curriculum-Aware Assessment	Targets completed learning areas and balances topic breadth with technical depth.
■ Deep Answer Diagnosis	Evaluates correctness, conceptual depth, practical understanding, clarity, confidence and gaps.
■ Dynamic Difficulty	Moves between easy, medium and hard questions based on recent candidate performance.
■ Intelligent Follow-Ups	Probes weak reasoning, challenges strong answers and exposes the boundary of real understanding.
■ Evidence-Based Report	Combines the complete interview into scores, strengths, gaps and actionable next steps.

HOW THE INTELLIGENCE LOOP WORKS

Candidate Profile → Curriculum → Question → Answer → AI Evaluation → Adaptive Decision → Follow-up / New Topic → Final Assessment

TECHNOLOGY & CAPABILITIES

React + TypeScript • Gemini-powered AI reasoning • Structured AI outputs • Interview state management • Voice input • Multilingual interaction • Evaluation export • Candidate/session management

WHY IT STANDS OUT

Traditional systems ask: “Can you answer this question?”

NOVA MINDS asks: “What does this answer reveal—and what should I ask next to find out more?”

CORE USP: An evidence-driven interview loop where every response becomes new intelligence for the next decision.
